Target Size
Many clubs even have targets from 16 " square up to 18 " $\times 24$ inches as close as 5 yards - on a few stages.
How would a $16 \times 16$ Target compare at 5 yards? Or a $12 \times 12$ at 5 Yards?

```
16" at 5 yrds
16" at }10\mathrm{ yrds
12" at 5 yrds
12" at 10 yrds

Note 1. Close distances are included so you can set up dry fire practice perspective at home.
Note 2. The natural loss of accuracy as distance increases is not estimated or included in the above calculations.
